Talia Cohen

Full Stack Developer

055-6724279 | taliachoen1@gmail.com | github.com/taliachoen

PROFESSIONAL SUMMARY

Full Stack Developer with 1+ years of hands-on experience building AI-powered web products with Node.js, Next.js, React and Firebase. Specialized in backend workflows: asynchronous processing of long-running AI tasks, third-party AI integrations (OpenAI, Claude, Suno), credit-based usage and payment integration.

EXPERIENCE

Full Stack Developer | LINKS AI **2025 – 10/2026**

Software studio developing web products for clients and in-house ventures

- Led full-stack development of an in-house AI media-generation platform (MVP) that creates music, images, videos and clips from user prompts; presented to investors as a product demo.
- Integrated multiple AI services (OpenAI GPT, Claude API, Suno API) behind a unified backend API, handling each provider's different request and response formats.
- Built asynchronous processing flows for long-running generation tasks, with job status tracking and progress updates in the UI.
- Implemented retry and failure-handling logic for external AI APIs to keep the user flow stable during provider timeouts and errors.
- Implemented a credit-based usage model with different costs per generation type, and integrated the platform with the team's Pelecard payment service.
- Built user authentication and data management with Firebase (Auth, Firestore), and stored generated media in Firebase Storage.
- Designed a simple, accessible UX for non-technical users using Next.js, React and Tailwind CSS.
- Released updates to the production environment on a cloud server (using PM2) and on Render.

PROJECTS

CareerAgent – AI Career Assistant (In Progress) github.com/taliachoen/career-agent

- Building an AI-powered job-search assistant as a TypeScript monorepo: NestJS REST API, Next.js frontend and shared types.
- Implemented JWT authentication with bcrypt password hashing and user-scoped job data using Prisma and PostgreSQL with versioned migrations.
- Wrote unit and end-to-end tests running against an isolated test database; next step is AI-based job-to-CV match scoring.

QueueInClick – Scheduling & Workflow Management System github.com/taliachoen/QueueInClick

- Built a full-stack scheduling system using React, Node.js, Express and MySQL.
- Designed REST APIs for services, working hours and appointment management, with structured data models and backend business logic.

Meet Talia – AI-Powered Portfolio meet-talia-client.onrender.com

- Developed a full-stack portfolio site using React and ASP.NET Core (C#), deployed on Render.
- Built an interactive "Ask the AI about me" feature: visitors choose what they look for in a developer, and an ASP.NET Core endpoint combines it with my CV into an OpenAI prompt that returns a short personalized summary.

TECHNICAL SKILLS

Backend: Node.js, Express.js, C# .NET, REST APIs, JWT

Frontend: React, Next.js, JavaScript, TypeScript, HTML5, CSS, Tailwind CSS

Databases & Cloud: Firebase (Auth, Firestore, Storage), MySQL, MongoDB

AI Integrations: OpenAI API, Claude API, Suno API

Deployment: Render, PM2

Testing & Tools: Unit Testing, Git, GitHub, Cursor, GitHub Copilot, Claude Code

EDUCATION

Practical Software Engineering Diploma – Machon Lev **2022 – 2024**

Advanced Full Stack Development Bootcamp – Elevation **2024**
